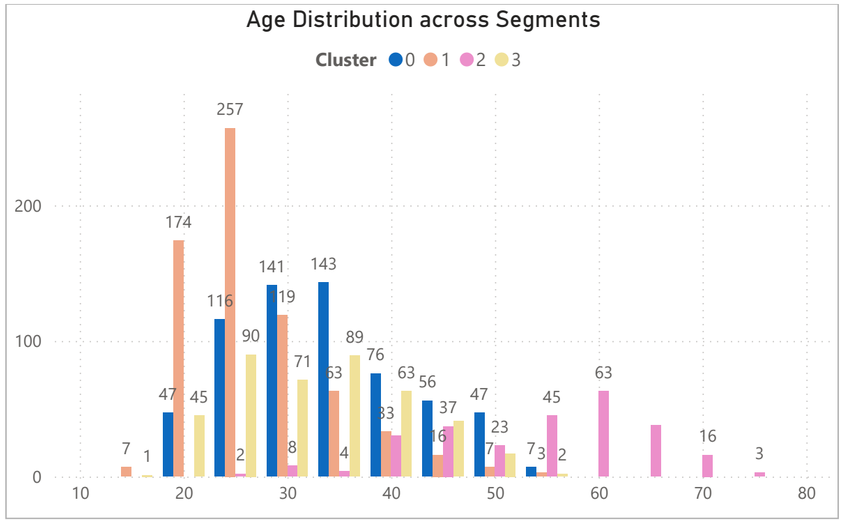
Customer Segmentation & Behavioral Analysis Using K-Means
DASHBOARD

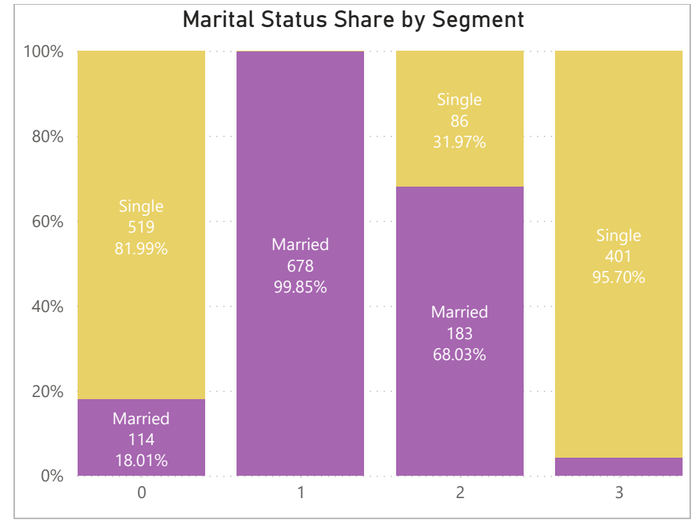
Total Customers	Customer Segemnt	Average Customer Income	Largest Segment Customers
2000	4	120.95K	679

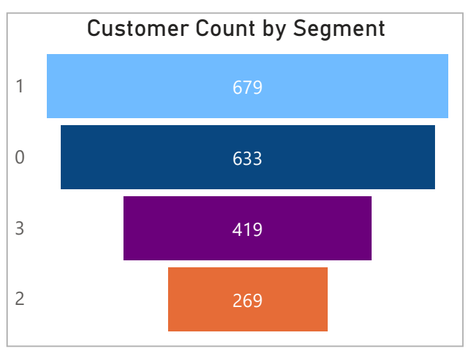
This dashboard presents customer segmentation and behavioral analysis using K-Means clustering. Customers were grouped based on demographic and income-related attributes, and the results were visualized in Power BI to support data-driven marketing and business decisions.

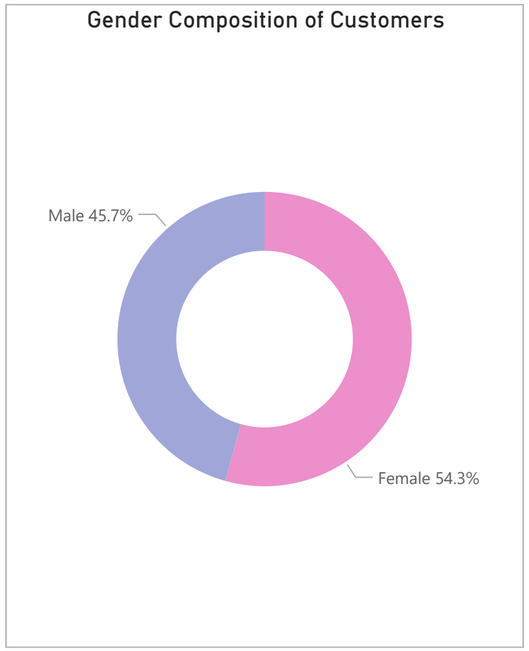
Summary

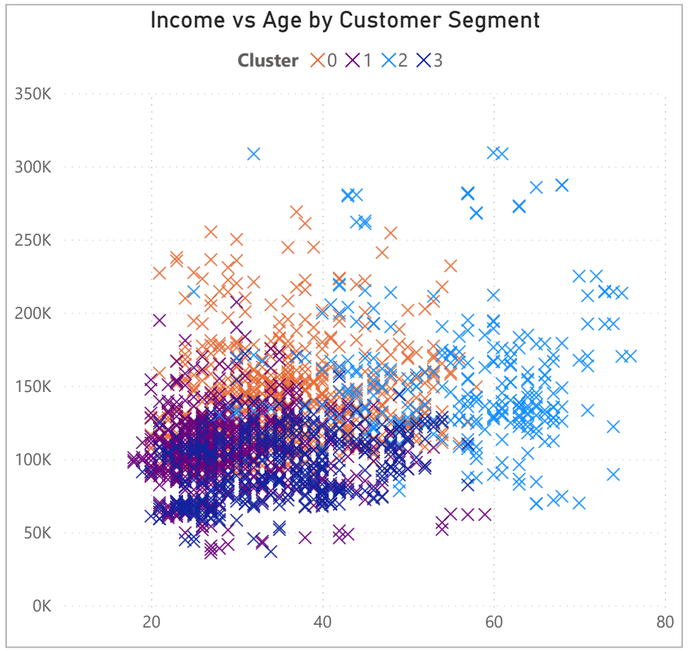
- Analyzed the data of **2,000** customers and divided them into **four unique clusters** through K-Means clustering technique.
- Recognized significant variations in income, age, and geographical characteristics among the customer groups.
- **Premium customers** contribute higher income potential and are ideal for personalized and high-value offers.
- **Budget-conscious segments** are more price-sensitive and respond better to discounts and promotional campaigns.
- The dashboard helps the stakeholders to understand the customer behavior and facilitates the implementation of the **targeted marketing strategies.**

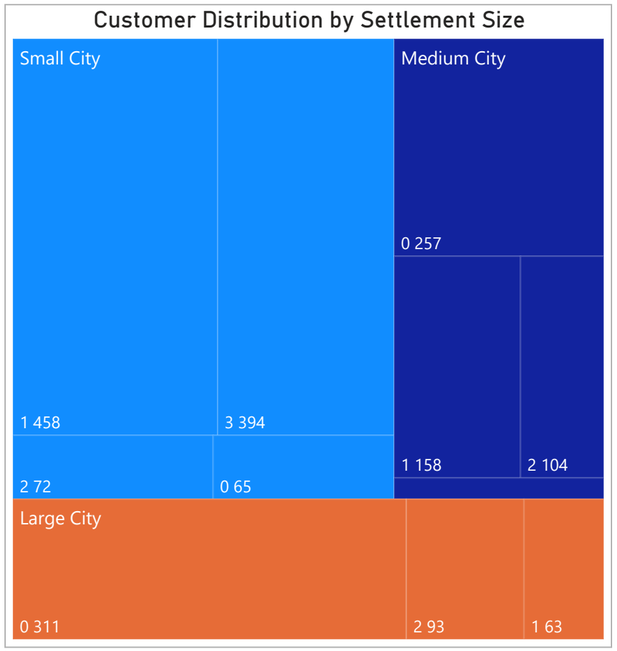




Segment Names








- **Segment 0 – Premium Customers**
- **Segment 1 – Value Customers**
- **Segment 2 – Budget-Conscious Customers**
- **Segment 3 – Emerging Customers**
